

To recap work performed:

6.25.21

10.00 on-site

11.30 - off site

1. Fixed wifi issue & logged into gateway router -- could not find ThriveWellness Wi-Fi Router
2. Traced and mapped NAS \\appointment (thrive papers) to PC_2
3. Assisted with receipt printing issue (use firefox)
4. Grabbed Computer 1

6.26.21

1. Installed new SSD hard drive
2. Installed Windows 10 Pro - \$130
3. Migrated docs & apps

6.27.21

0815: Dropped off rebuilt Computer 1

NOTES:

They appear to have two Comcast router/modems. They might be chained. ThriveWellness Wi-Fi is slow compared to CBCI-1FCD-2.4

** I also found a Netgear wireless router under the front desk - this is probably the ThriveWellness SSID router.

Comcast Gateway Modem/Router= 10.1.10.1 cusadmin / highspeed --> default that needs to be changed.

Wi-Fi = CBCI-1FCD-2.4 / creek0176celery

OKI printer = 10.1.10.200

POS NAS = 10.1.10.110 = \\appointment (Thrive Docs). -- pos / WellnessPOS
